

What You Need to Know About

Hepatitis B Vaccine

Hepatitis B is caused by the hepatitis B virus and is a serious disease that affects the liver. It can range from mild and short to serious, life long illness.

Key Points

CDC recommends all non-vaccinated adults should receive this 3 shot series. Especially the diabetic population

Acute hepatitis B is short-term. Chronic hepatitis B is lifelong and can cause serious health problems like liver damage and liver cancer.

The CDC estimates that 850,000 people have chronic hepatitis B, but with the vaccinations there has been a marked decline of short-term infections.

Patient Information

Hepatitis B vaccine is recommended for all children 0 through 18 years of age

1

Most insurance companies cover the vaccine at no cost.

2

On average only 7 out of 10 adults infected with hepatitis B actually develop symptoms
