

What You Need to Know About

Tdap & Td

A Tdap vaccine protects against three potentially life-threatening diseases: tetanus, diphtheria, and pertussis (whooping cough). Td is the standard booster vaccine protecting against tetanus and diphtheria.

Key Points

CDC recommends vaccination when history cannot be verified and updates your tetanus which is recommended every 10 years

Tdap vaccination is very important for anyone having close contact with a baby younger than 12 months

25% Only 1 in 4 adults are up to date on the Tdap vaccine

Patient Information

We cannot administer this vaccine to you if you have an open wound- Don't wait!

1

Most insurance companies cover the vaccine at no cost.

2

The CDC recommends Tdap for every pregnancy at 27-36 weeks.
